Description

Environment:
Device: iPhone 16 Pro
OS: iOS 26.4
App Version: RAM Syniotec (3.0.1)

Description:
In the Documents section of the Equipment Profile screen, document filenames are displayed as raw URL-encoded strings (e.g. "media%2Fd1385c59-ecdd-43da-81c6...") instead of human readable file names. This makes it impossible for users to identify which document they are about to open.

Steps to Reproduce:

1. Complete the precondition steps and navigate to the Davaleba Equipment Profile

2. Scroll down to the Documents section

3. Observe the filenames listed under Technical Description

Expected Result:
Document filenames are displayed as human readable names (e.g. "Technical Description.pdf" or the original uploaded filename).

Actual Result:
Document filenames are displayed as raw URL-encoded strings that are unreadable and provide no meaningful information to the user.
